

CHAPTER 8

CAPITAL ASSET ACCOUNTING

SCOPE

This chapter addresses the accountability for capital assets purchased by the State of Indiana – how capital asset records are maintained, how such assets are reported for financial reporting purposes, and the responsibility of agency personnel regarding such assets. Also included is general guidance for capital asset accounting in the ENCOMPASS financial system, rules on the disposition of surplus property, and federal requirements for capital assets purchased with federal funds.

Table of Contents

SCOPE.....	1

8.1 STATUTORY AUTHORITY

IC 4-13-1, Sec. 20 (b), regarding the Department of Administration, states in part: “The department shall do both of the following: (1) Provide for the periodic inspection, appraisal, and inventory of all of the state's property. (2) Require reports from each state agency concerning the property in the custody of each state agency.”

C 4-20.5-6, Sec. 3, regarding real property, states: “The department shall provide for the periodic inspection, appraisal, and inventory of all of the state's property, and shall require reports from agencies concerning the property in their custody.”

Capital asset inventories are monitored to ensure compliance and accountability by IDOA through cooperation of the agencies, the Auditor of State, and the State Board of Accounts. Agency officials are ultimately responsible for the accountability and security of all assets.

8.2 ACCOUNTING THEORY

8.2.1 Financial Reports - State of Indiana CAFR

The State Comprehensive Annual Financial Report (CAFR) is compiled and audited each fiscal year. This report is vital to the State's bond rating and must be prepared in accordance with generally accepted accounting principles (GAAP), which requires capital assets to be included at cost (or estimated cost) and depreciated over the useful life of the asset. In order to obtain this financial information, each agency must maintain certain required information in the asset module of ENCOMPASS. The State of

Indiana requires that assets costing \$500 and over are included in the ENCOMPASS financial system, thus available for inclusion in the financial statements.

8.2.1.1

What are capital assets?

As defined in GASB 34, capital assets include all of the following, assuming a useful life of greater than one year:*

- *Land (including right of way, easements)*
- *Improvements to Land*
- *Infrastructure (roadways, bridges, etc.)*
- *Buildings*
- *Improvements Other than Buildings*
- *Transportation Equipment*
- *Machinery and Other Equipment*
- *Construction in Progress*

8.2.1.2

Asset depreciation – Capital Asset vs. Maintenance

Except for land and inexhaustible collections, certain infrastructure reported under the modified approach (see GASB 34) and construction in progress, which will be moved to an asset category when completed, capital assets are required to be depreciated over the useful life of the asset. Only the Department of Transportation (INDOT) is currently utilizing the modified approach.

Improvements and repairs which allow an asset to continue to be used during its originally established useful life are expensed as a maintenance expense rather than being capitalized (added to the asset value). Improvements and repairs which extend the useful life of an asset are called preservation costs and should be capitalized for all capital assets, with the exception of infrastructure which is reported under the modified approach. Additions and improvements which increase the capacity or efficiency of the asset should be capitalized for all assets, including all infrastructure.

8.2.1.3

Capital Asset Policy

* Government Accounting Standards Board, Statement 34

*The capital asset policy for Indiana State Government, which includes details of capitalization and depreciation, is maintained by the Auditor of State and can be found at
http://www.in.gov/auditor/files/Capital_Asset_Policy_July_2009.pdf.*

8.3 INTERNAL CONTROL

Agency personnel are responsible for accountability for all assets under their control, including capital assets. Adequate asset management staff should be assigned to recording and maintaining, on the ENCOMPASS financial system, all capital assets with a cost greater than \$500. Assets are automatically capitalized upon approval by either the BU approver or AOS approver. Controls should be in effect to assure that additions, disposals, and transfers to other departments or agencies are recorded timely. Inventories of these assets should be performed each year in each department and compared to the ENCOMPASS listing. Results of inventories should be retained for audit purposes.

Capital assets with a cost \$500 or less may be included in ENCOMPASS Asset Management at the agency's option. All assets in the system should be capitalized.

8.4 BUSINESS PROCESSES

8.4.1 Acquisition of Capital Assets

The preferred process for acquisition of capital assets is through ePro purchasing. If the correct accounts are used for asset purchases (55xxxx), the asset will automatically be converted from an expense (55xxxx) to an asset (15xxxx) and loaded into the asset management database.

8.4.1.1 Donated Assets

Donated assets should be entered directly into Asset Management at estimated fair value at the date of acquisition.

8.4.1.2 Required Chartfields

For all assets with cost (if donated asset, market value) above \$500, Tag number, Custodian and Location are required asset fields in order to load an asset to Asset Management (AM). These fields must be completed when the asset is delivered to and accepted by the agency receiver; or, if the actual receiver is offline, the entry person recording from the receiver must enter this information. Agency

management should assess, and in some cases change, their business processes in order to provide this information to the person receiving the asset into ENCOMPASS.

If an asset is processed into AM at a cost of less than \$500, these fields (Tag number, Custodian and Location) are not required; however, in the event that an error was made and the cost of the asset is later changed to an amount exceeding \$500, it is the responsibility of the Asset Entry person to record these fields.

Other information which must be maintained includes the Asset Category, Asset Type, Acquisition Date, Asset Description, Asset Acquisition Cost, Purchasing Fund, Serial Number (if applicable), VIN Number (vehicles) and, if purchased with federal funds or a capital project, the project number involved.

Tags may be purchased through Pitney Bowes Print Center at 317-233-5739 or e-mail pbprintcenter@idoa.in.gov.

8.4.1.3

Asset Profile ID

In the process of purchasing an asset, an asset profile ID must be selected; this asset profile ID will assure that the correct useful life and depreciation is applied in Asset Management. If your asset doesn't fit any of the available profile IDs as listed in Appendix 8.5.3 at the end of this chapter, please submit a GMIS issue defining your request.

8.4.2

Transfer/Disposal of Capital Assets

All transfers, sales, retirements and other disposals of capital assets must be processed through and approved by State Surplus Property division of IDOA by submitting Form 13812, Notification of Surplus State-Owned Property.

8.4.2.1

Transfer of Capital Assets to Another State Agency

If an asset is being transferred from one agency to another, the "donator" agency will generate the Transfer process in ENCOMPASS Asset Management. The "receiving" agency must manually assign a new asset tag number to the asset. The acquisition date and original cost for the asset do not change. The fund number for the asset must be changed to a "receiving" agency fund number. When the transfer is made, the asset cost and accumulated depreciation will be automatically transferred as well.

8.4.2.2

Transfer by Sale of Capital Asset to Other State Agency

A sale of an asset to another state agency must also be approved by State Surplus or, in the case of motor vehicles, trailers, and INDOT road equipment, IDOA Fleet Management. State Surplus or Fleet Management will work with the agency to determine the type of sale, location, etc. Net proceeds, after selling costs of Surplus or Motor Pool, are subsequently credited to the selling agency.

8.4.3

Retirement of Capital Assets

The Department of Administration establishes guidelines and requirements relating to the retirement of agency assets. Generally, surplus property may be considered "retired" if disposed of in any of the following ways:

- *Sent to Surplus property division (AM Retirement Code - State Surplus)
- *Trade-in on another asset from an outside party; since a purchase is involved here, IDOA Procurement and Surplus property must be involved; requisitions for the new items must include the price without trade-in, the trade-in value, and the price with trade-in. (AM Retirement Code – Traded in for Another Asset)
- Scrap when no other disposition is efficient or economical; contact the Recycling Program Manager in the Operations Division of the Department of Administration prior to disposal. (AM Retirement Code – Scrapped Asset)
- *Sell at public auction or by sealed bid; Surplus Property will determine method of sale' Net proceeds, after costs of Surplus or Motor Pool, are credited to the selling agency. (AM Retirement Code – Retirement by Sale)
- *Sell to local unit of government by sealed bid; Surplus Property will assist. Net proceeds, after costs of Surplus or Motor Pool, are credited to the selling agency. (AM Retirement Code – Retirement by Sale)
- Stolen assets should be reported to the Capital Police prior to processing retirement. (AM Retirement Code – Disposal Due to Theft)
- Assets destroyed by flood, fire, etc. Document the event resulting in the loss. (AM Retirement Code – Casualty Loss)
- Retirement in system due to duplicate entry (AM Retirement Code – Duplicate)All retirements, whether or not State Surplus is involved, must be recorded in the ENCOMPASS Asset Management system, including accounting for any money received..

**Must have prior permission of State Surplus Property Division or, in the case of vehicles, Fleet Management*

8.4.4

Leased Assets

If a capital asset is acquired through a lease contract, this must be indicated in the checkbox when the purchase order is created. Purchase order staff should take care to NOT enter an asset profile or flag as an asset. The fiscal department of the Department of Administration will review all lease contracts and enter applicable information into the Asset Management system, thus determining whether a “capital” or “operating” lease. If a “capital” lease, financial information, including depreciation, for the asset will be maintained the same as for a purchased asset. A Lease Guide for ePro Users is available on the IDOA website; procedures therein must be followed and required documents sent to the IDOA controller staff.

All lease contracts must be processed on a timely basis by the Department of Administration controller.

8.4.5 Assets Purchased with Federal Funds or through Capital Projects

If assets are purchased with federal funds and/or through a capital construction project, this information will be maintained in Project Costing. When completed, the asset is sent to AM by the PC Asset Integration Manager.

The title of equipment purchased by an agency with federal funds, in whole or in part, vests with the State. The agency is to use, manage, and dispose of the asset in accordance with State laws, rules, and procedures. The asset shall be used by the agency in the program or project for which it was acquired for as long as needed, whether or not the project or program continues to be supported by federal funds.

Property records must be kept in compliance with state rules. In addition, the records must include the percentage of federal participation in the cost of the asset, the location, use and condition of the asset, and ultimate disposition data including the date of disposal and any sales price. Agencies should maintain this information on the ENCOMPASS financial system. Records showing proper disposition of the asset should be maintained at least three years from date of disposition.

Any purchase, use, or disposal of assets purchased with federal funds must be in accordance with guidelines established in Office of Management and Budget (OMB) Circular A-87, which can be found at <http://www.whitehouse.gov/omb/circulars>.

8.4.6 Physical Inventories

Each year a physical inventory is to be taken and compared to the master listing from the ENCOMPASS Asset Management system. This helps to ensure the asset inventory is accurate and that assets have not left the agency without authorization. It also aids in identifying unused or obsolete assets. Evidence of the physical inventory must be maintained in the agency’s records.

8.5 APPENDICES

8.5.1 Capital Asset Policy

The official capital asset policy of the State of Indiana, as established by the Auditor of State and approved by the Indiana Department of Administration, is located at http://www.in.gov/auditor/files/Capital_Asset_Policy_July_2009.pdf.

8.5.2

Capital Asset Categories, Profiles and Expense Accounts

CAPITAL ASSET CATEGORIES AND PROFILES – ENCOMPASS FINANCIAL SYSTEM – as of May 1, 2010			
CATEGORY	PROFILE	DESCRIPTION/COMMENT	ACCT #
101 LAND USEFUL LIFE – DOES NOT APPLY		Non depreciable land purchases, including easements with indefinite useful lives	551101
	10101 – Land Purchases	General Land purchases	
	10102 – Right of Way	Land Purchase for highway right of way	
	10104 – Condemnation	Becomes part of land cost	
	10109 – Permanent easements, other than Right of Way	Easements for access, construction, etc. Use only if indefinite life, no end date	
	10110 – Conservation Land Rights	With indefinite lives; use only if indefinite life, no end date	
110 ASSOCIATED LAND COSTS USEFUL LIFE – DOES NOT APPLY		Non depreciable; becomes part of land cost	551110
	11001 - Incentive Payment - Land Value	Additional payment to seller	
	11060 - Incentive Payment - Relocation	Relocation payment to seller	
	11099 - Other Assoc Land Costs
